Sustainability in Agriculture, Food & Finance

Measuring, Managing, Monetizing and Marketing Impacts

### Creating true net value

Current food production systems tolerate massive negative environmental and social impacts.

Driven by short term economic incentives, the food and farming sector destroys values through e.g. soil depletion, loss of biodiversity, its contribution to climate change, adverse health and livelihoods aspects.

To help **transforming the sector** we have started Soil & More Impacts.

Soil & More Impacts has the ambition to enable the transition to a **net positive food system that impacts** -long term- ecological, social and economic value creation.

We believe that the food system transition provides an excellent **strategic opportunity for food and farming** companies. Individually, and as part of a collective value chain, it provides the possibility to explore innovation, to become more resilient as well as to maintain long-term productivity.

This transition in the capital-intensive food and farming sector needs to be **supported by** committed and well-informed **finance** parties.

Soil & More Impacts' **mission** is to design Sustainable Strategies (**2S**) for Food, Farming and Finance (**3F**) companies to measure, manage, monetize & market (**4M**) their impacts and so, to **create true net value**.

### Our services

For us, sustainability starts in the soil.

**Farming** We design interventions to help (cooperatives of) farmers in realizing better long-term yields and with improvements of their value capturing in local and global food value chains.

**Food** We help food companies in their structuring of supply chains to turn current issues into perspectives in order to become more sustainable on the long term. This process can include all steps up to a sustainability report as well as concrete interventions in the supply chain.

**Finance** We service Finance clients with regard to their Farming & Food portfolio in assessing challenges and opportunities arising due to changes in strategic conditions. We assess the external cost of food production in cooperation with financial auditing companies.

Our Team of **Soil, Climate, Farming, Sustainability, IT and Finance Experts** looks forward to support you from **Amsterdam, Hamburg** or wherever you operate - **worldwide**.
