

The Lenzing Group is a world market leader headquartered in Austria, with production sites in all major markets as well as a worldwide network of sales and marketing offices. Lenzing supplies the global textile and nonwovens industry with high-quality botanic cellulosic fibers. Its portfolio ranges from dissolving pulp to standard and specialty cellulosic fibers.

The Lenzing Biorefinery

Lenzing's sophisticated biorefinery process ensures that 100 percent of wood constituents are used to produce dissolving wood pulp - the most important raw material in the production of Lenzing's fibers of botanic origin - biorefinery products including biobased materials, and bioenergy, thus maximizing value creation from an economic and environmental perspective.

LENZING™ ACETIC ACID BIOBASED

Lenzing has a leading position with its biobased acetic acid in a market that predominantly consists of acetic acid originating from fossil-based raw materials. LENZING™ Acetic Acid Biobased has significantly lower Greenhouse Gas (GHG) impact than the EU and global average of acetic acid production. It shows a carbon footprint which is more than 85% lower than that of fossil-based acetic acid. This lower carbon footprint is confirmed by an expert third party Life Cycle Analysis (LCA) report and will be shown in more detail during the conference.
